Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramarethinam et al in view of Lehmborg et al (US 5952023).

Ramarethinam et al disclose the treatment of rolled tea material with sprayed lipase (see entire document, especially page 331).

The claims differ as to the use of a solvent and drying.

Lehmborg et al disclose the treatment of tea with lipase wherein water is the solvent for the enzyme and the product is dried (see entire patent, especially claims 1,5, 6, and 9).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use water and drying as taught by Lehmborg et al in that of Ramarethinam et al because the use of water allows for uniform enzyme distribution and drying is conventional in the tea art.

Applicant is using known components for their art-recognized function to obtain no more than expected results
